## Buying Department.

The Buying Department of my Office offers the largest and best collection of Trees, Shrubs and Plants in the world. The largest, because it offers the products of the leading nurseries of Europe, America and Japan; the best, because expert knowledge is used in selecting stock in the best nurseries. This Department, although only established ten years, has given such satisfaction that there are but few nurserymen and plantsmen who handle so much stock.

My business is purely an office one. I have no stock on hand that must be sold. My customers' interests and mine are identical, and when anything is ordered from me, I buy it direct from the very best grower of that particular tree or shrub, wherever he may be found, in America, Europe or Japan. By combining the orders of a great many people, I obtain very low prices, and give my customers the benefit of them by charging only a moderate profit for my services.

In connection with my office, I have extensive Experimental Grounds in which all novelties, rarities and standard varieties are tested.

To avoid misunderstandings, customers are requested to read terms on next page before ordering.

## J. WILKINSON ELLIOTT,

## TELEPHONES:

## Terms of Payment, Etc.

Please Note the Dates given for receiving Orders for Stock to be Imported. Orders are often sent to me too late to be filled.

## TERMS OF PAYMENT.

My terms of payment are invariably eash on delivery, which does not mean that 1 ship C. O. D., as I will not do so moder any circumstances. I deliver the goods and mail bills at the sume time, aud expect payment within a few days. People unknown to me will please send references with their order.

## PRICES.

Prices in this list are made subject to stock offered being unsold when ordered.

## GUARANTEES.

I guarantec all nursery stock furnished by me to be first class, true to nane and velivered in good condition when shipped by express. Stock is shipped by freight at purchaser's risk, unless otherwise agreed upon.

I do sot Guabanter: stock to ghow on resutits in any way. No comblaline whli be enteitalned that is not made 1mmediatriy hion becinht of stock.

There are so many catues for failure over which I have no eontrol, that I can assume no responsibility after stock is delivered in good order. Poor soil, unfavorable weather, ignorant or careless culture all contribute to failure and all are beyond my control.

A Catalogue as comprehensive as this, must of necessity offer some varieties of dificult culture, and when these are ordered, I presume the people ordering them have the knowledge needed for their culture. Successiul gardening requires knowledge, en thusiasm and perseverance, and these I can not supply, bat I will be glad to make selection for the "can't be killed" class"of plants for people who wish them.

## IMPORT ORDERS.

Import orders are taken subject to failmre of crops.

## SHIPPING DIRECTIONS.

Please give explicit shipping directions, stating whether stock is to be slipped by freight or express, and by what. route. Early orders for trecs and shrubs can be generally shipped safely by freight, but plants will be sent by freight at the risk of the purchaser only.

## EARLY ORDERS.

The earlicu orders are sent, the better I can fill them. Orders for Rhododendrons, Hardy Azaleas and Kelway l'annies must be received not later than March 1st, for spring delivery.

## CLUB ORDERS.

No smaller quantities will be supplied than those quoted in this list, but it is suggested where these quantities are too large, that two or three friends or neighbors could combine their orders to adrantage, and save transportation charges.

## SPECIAL IMPORT ORDERS.

Special orders will le taken to import from Europe any thing desired in trees, shruls or plants. For this service 1 charge a commision of 25 per cent., but as 1 buy everything from the growers at lowest wholesale prices, cusfomers can depend on getting the stock for less money than it can be obtained in any other way. My knowledge of nursery stock and my experience in importing, will save my customers from any mistakes in bringing over stock not suited to our climate, or stock that can be bonght to better advantuge on this side.

## EXPERIMENTAL GROUNDS.

Fror my own information and for the benefit of my customers I have established experimental grounds where all promising novelties are tested. I also grow all varieties of trees, shrubs and hardy plants generally in the trade, so that I can have full information as to their respective merits. These grounds are also designed to help my landscape-gardening work by kceping me eonstantly in touch with the material I am using.

## REFERENCES.

Many of the leading amateurs and public parks throughout the country find it to their advantage to have me buy all their stock for them. When desired I will send list of these as references for my reliability and quality of stock delivered.

## Upright Honeysuckles in Bloom.

I have never seen anything more striking than the display of the New Upright Honeysuckles in the Arnold Arboretum in Boston. These splendid shrubs are made a special feature in this famons botanieal garden and nothing is more worthy of a prominent position. They delight thonsands in the spring when they are covered with their charming sweet-scented flowers, but their great glory is at midsummer when they are loaded with the most brilliant and beantiful berries borne by any shrub. When they beeome known, I predict a popularity for these shrubs beyond that of the popular Llardy Hydrangea whieh is now sold by the hundreds of thousands. They have every good quality: Perfect hardiness, vigorous growth, beautiful rich green foliage that is as presistent as that of the California privet and this season was bright and green until almost Christmas and two distinct seasons of unsurpassed beauty. These nust not be confused with the climbing Honeysuckles so extensively used for covering porehes. They are vigorous upright growing shrubs suitable for large groups, specimens, screens or untrimmed hedges. I have been offering these shrubs for two or three years but could only obtain a few plants at a high price. I now control a stoek of a few thousand plants which, while they last, I will furnish at the following low prices :

Lonicera, Bella Candida, each 30 cents, $\$ 3.00$ per dozen, $\$ 20.00$ per 100,

$$
\begin{array}{llllllllll}
\text { " } & \text { " } & \text { Rosea, } & \text { " } & 30 & " & 3.00 & " & 20.00 & " \\
" & " & \text { Albida, } & " & 30 & " & 3.00 & " & 20.00 & \text { " }
\end{array}
$$

A few large plants, 50 eents each, $\$ 5.00$ per dozen.

## Lilies for Spring Planting.

The lily bulles offered below were reecived from Japan in Deeember, were repaeked in sand and stored in a cold cellar, and are now in prime condition for spring planting.

## SPECIAL AURATUM BULBS.

Attention is direeted to the extra large Auratum liiy bulbs offered below. These bulbs are of an extraordinary size and will give remarkable resulits. One of my customers had a plant with 66 perfect flowers from a bulb of this size. They are fine for outdoor planting, or grown in large pots they make splendit epeeimens for the decoration of the porch or consersatory. Lilites like a light, rich, well drained but moist soil, and a partially shaded location. If planted in full exposure to the sun, the bed should be carefully mulehed with two inches of rotted manure, leaves, sphagnmm or moss. They thrive and are very effective when planted thickly among Rhododendrons or $\Lambda$ \%aleas, and may be used to advantage in any open spaces that may be in the shrubbery. Bulbs should be planted six inches deep and care taken that no manure eomes in direct contaet with them. Planted in quantity they may be had in bloom from June until frost, and bloom freely the first season after planting.

Rubrum, Melpomene and Album Lilies will thrive and increase in almost any soil, but unless the eonditions are very favorable Auratum Lilies deteriorate and a percentage will be lost every year, but they are so truly splendid, and are so inexpensive at the low prices at whieh I offer them that they will be found the best garden investment that ean be made. Try these Lilies, and send your order at once, so that they ean be sent to you early in the spring.

Longiflorum are similar in appearance to the Bermuda Easter Lilics, but are much more satisfactory for outdoor planting, as they are perfeetly hardy.

BLOOM OF AURATUII LILY.

## PRICES OF LILIES.

Of some varieties of the rarer Lilies I have only a few bulbs unsold, and early orders must be sent to secure them.
These prices include all eharges execpt freight or express charges from Pittsburgh. The measurements given refer to cirenmference of bulbs, but the Japanese evidently use an elastic tape, as the butbs never quite come up to the measurements given. I give these sizes, as they are generally used by the trade.

Brownii, an extremely handsome hardy Lily with large trumpet shaped flowers, like those of Tougi florum or the Bermuda Faster Lily, pure white inside, but the outcr part of the petals is a beautiful purplish brown. This is a very choice I, ily, but good bulbs of it are scarce. I lave suceeeded in finding a fine stock of extra fine bulbs in Europe, which are very superior to the Japanese stock. This Lily should be grown iu every garden, 30 c each......... .............. .................................... 325

## Low Prices for Hydrangeas.

## Shipped from Station near Pittsburgh.

Prices good until stock is exhausted. Fall or spring delivery.

No nore popular plant or shrub has ever been sent out than Hydrangea Panienlata Grandiflora, and I take great pleasure in offering my customers a large stock of splendid vigorous plants at such axtremely low prices that it will enable them to plant this effective shrub in quantity:

People who have only seen this Hydrangea grown singly as specimens lave no conception of how beantiful and effective they are when planted in masses. Thicy are planted in this way at Newport, R. I., which is famous for its fime gardens, and almost as famous for its Hydrangeas. These Hydrangeas can be planted in connection with other shrubbery or in isolated beds, in the same manner as Cannas, Caladiums or other strong growing bedding plants. They are perfectly hardy, and once planted they are a permanent addition to the lawn or garden. When grown in beds or groups they should be planted about two feet apart in very ricli soil, which shonld be liberally enriched anmully with rotten stable manme, and in the early spring, before they commence to grow, cut back so as to leave only two or three inches of the new growth of the previons season, and if extremely large flowers are desired, cut out some of the weakest shoots after growth has commenced. Treated in this same manner they will produce enormous panieles of flowers, and the beds will be a solid mass of bloom. They bloom profusely the same season planted. Try them. You will find them more than satisfactory.

GROUP OF HARDY HYDRANGEAS ON LAWN.-From the Finglish lilower Garden.

## Special Offer of Gladioli.

Gladioli sent postpaid by mail for 10 ecnts per dozen, and 75 eents per 100 in addition to prices quoted. Prices good until withdrawn. Delivery at any time from November until June 15th

For eutting, for the decoration of the house, or for any purpose for which eut flowers are used during the summer and fall months, no flower ean be grown as satinfactory as the Gladiolus. The spikes of flowers are large, showy and very beantiful, and last a week in water after cutting. By planting at intervals from the 1 st of $A$ pril until the 15 th of June, they can be had in blossom from June 25 th until frost. For cutting purposes they ean be grown in the vegetable garden or any convenient place, and as they can be planted very closely, a large quantity can be grown in very small space. They are of the easiest culture, failure being practically impossible, and it can be safely estimated that the bulbs will increase a
(Special offer of Gladioli continued on next page),

## SPECIAL OFFER OF GLADIOLI.-Continued.

least fifty per cent. every season. The bulbs can be wintered in any room or cellar that is free from frost. The bulbs offered below are strictly first-class, and are from the largest and best Gladiolus grower in the world. The bright eolored Gladioli are extremely effective if planted in masses in the margin of shrubbery. At these extremely low prices, which are really wholesale, they can be used in quantity. All first-elass bulbs. Second size bulls can be furnished at still lower prices.

No smaller quantities will be supplied than those quoted, but 100 will be furnished in four sorts, and 1,000 in ten sorts, if desired.

## XXX लixture.

This is a specially fine mixture, made up of over 100 fine named varieties, and includes also a good per cent. of Childsii llybirds. Just the stock for those who want only the very best that can possibly be had. lirst size, per 100 , $\$ 2.50$; per $1,000, \$ 20.00$.

## Best Named Gladioli.

## 100 Bulbs in Twenty or Less Varieties will be Furnished at the Hundred Rate.

## Not Less than One Dozen Named Gladioli Will be Furnished.

Can be Furnished from November 1st untill June 15th.

Group of Rhododendrons, on Grounds of H. H.Hunnewell, Esq., Wellesley, Mass.

## ALL THE RHODODENDRONS ON MR. HUNNEWELL'S GROUNDS, OVER 10,000, WERE SUPPLIED FROM THE NURSERY OF MR. ANTHONY WATERER.

## IMPORT PRICES FOR

## Rhododendrons and Hardy Azaleas.

## ORDERS MUST BE RECEIVED NOT LATER THAN MARCH 1st.

I publish Illustrated Descriptive Pamphlet of Rhododendrons and Hardy Azaleas, which gives full cultural dipections. It is sent free on application.

#### Abstract

Although I give prices according to height, such classification is delusive, for a well grown plant 18 inches high is worth more than a poorly grown plant twice as high. I guarantee the stock offered below to be grown in the nursery of Mr. Anthony Waterer, and to be satisfactory in every respect. The sizes of Rhododendrons are given in inches, but the plants will be larger and smaller than the sizes quoted, according to the habit of growth of the variety.

I notice that onc of iny competitors pretcnds to meet my prices on RHODODENDRONS by describing them in three or four different qualitics, and offering his POOREST quality at about my prices, and his BEST quality at an advance of 100 per cent. I lave only $0 . N \mathrm{~F}$ quality to offer, and that is the lest in the world, and incomparably better than can be obtained from any American dealer, whether grower or importer. I am, perhaps, the largest importer of RHODOLENDRONS in this country, and can easily satisfy intending buyers that my stock is the best and my prices are the lowest. Scores of the leading parks and amateurs have been supplied with this stock and their names will be furnished on application.

## EVEIRGREEN SHIRUBS.

The foregoing are import prices for orders received not later than March 1, and cancel all previous quotations. These prices include all charges for parking, custom house charges and freight to New York City. Freight from New York to point of destination must be paid by purchascr. All orders will be packed in separate cases in Fingland and will be shipped direct to customers from New York by my agent there. Safe arrival in good condition and satisfaction guaranteed. Stock will be delivered in April at the proper time for phantiug. If preferred, I will import large orders for a commission of 25 per cent. on actual cost. This will make the stock cost 5 to 10 per cent. less than the prices quoted above. No orders for less than 12 plants will be filled, but the twelve inay be assorted from anything oflered in above list. The above prices include the 30 per cent. duty rccently placed upou imported nursery stock.

## New Lilacs on their own Roots.

Of late years there has been a multitude of new varietics of lilacs grown, and some of them have very great beauty, but unfortunately almost all the stock offered, both in this comntry and Europe, has been budded ou privet and is practically worthless, for Lilacs grown on this are certain to die in a few years. Nurserymen bud Lilacs on privet because they can produce a large stock quickly and inexpensively, but one Lilac on its own roots is worth a score of budded plants.

I have arranged with a leading English nusery to supply the varieties described, which are of the best, in good, strong plants On Their Own Roots. For prices finded Lilacs, see my general list of shrubs.

Sonvenir de Lomis Spath, most distinct and beautiful variety, trusarle iderraye,
white Lilac.

$$
\text { Price, } \$ 1.00 \text { each ; } \$ 10.00 \text { per } 1
$$

Not less than one dozen supplied unless with an import order for Rhod androns and Azaleas, or other stock from the mursery of Anthony Waterer, which must anount to at least ton dollars. Orblers must reach me mot later than Mareh 1 st. Prices include all import charges and freight to New York City. Freight from New York City must be paid by purchaser. Quality guaranteed, and stock need not be taken if not satisfactory.

## Other Choice Stock Grown by Anthony Waterer.

## Orders Must Be Recelved Not Later Than Mareh 1 st.

No order for less than ten dollars' worth of the following stock will be filled unless it is combined with an order of Rhododendrons and Azaleas, or other stock from nursery of Mr. Anthony Waterer, the entire order to amount to not less than ten dollars. The prices quoted include all duty, custom house charges and freight paid to Now York City. Freight from New York City to be paid by purchaser.

[^0]Albes I'ungens Argentea, (Silver Blue Spruce), very rare and elioice, $\$ 6.00, \$ 7.00, \$ 8.00$, and up to $\$ 15.00$ each for perfect sliaped trees.
Aloles Concolor. This is another splendid American evergreen of wbich it is almost impossible to get good trees in this commtry. 4 feet high, \&4.00 each.
Abies Concolior Violacea, very rare and beautiful; superl) coloring; E10.00 each.
Cedrus Atluntica Glanca. Mr, William Falconer says this is the finest blne evergreen in cnltivation, but lie don't say wbore to get good trees of it in America and he doesn't know, nor do I. Mr. Watererhas them in plenty; $3,4,5,6$ and, 8 feet high, splendid
speeimens; $\$ 3.00$ to $\$ 5.00$ each.

## OTHER CHOICE STOCK GROWN BY ANTHONY WATERER.-Continued.

Junperns Chinensis Aurea, (Golden Chinese Juniper), 2 to 3 ft $\$ 1.00$ each, specimens from $\$ 4.00$ to $\$ 20.00$ each
Taxus Adpressa, onc of the hardiest yows: \$1-50 each.
Baeeata, (Hinglish liew), $1 \frac{1}{2}$ to 2 feet; 50 cts . each, $\$ 5.00$ per doz.: specimens, $\$ 5.00$ to $\$ 20.00$ each.
Taxus Baceatr Var. Elegantlsslma, (Golden Linglish lew), 1 t/2 to 2 ft : \$1.00 each ; specimens, $\$ 5.00$ to $\$ 25.00$ each.
Seedling Golelen Yews, 2 ft ., $\$ 5.50$ each; specimens, $\$ 3.50$ to $\$ 50.00$ each.
Thc Stock of the varions kinds of Golden lews in this Nursery has no equal ; it contains many thousands of Plants, 20 to 40 years old, as pyranids. and worked on the conmon lew, with heads to to 12 feet in circumference. They minst be seen to be appreciated.

## HOLLIES.

Common Green, English, $3,4,5$ and 6 ft . each, $\$ 100$ to $\$ 7.00$. "
The following varieties of Golden and Variegated Hollies are undoubtedly anongst the most beantiful evergrccus in cultivation. Unfortunately, with the exception of the Common Green English variety, they are not liardy in this country north of Washington. They are, however, finc for growing in tubs aud may be wintered in a slied or cold light cellar.

## Altaclarensis

## Clllia

Laurlfolia.
Moonllght.
Myrtifolia
Scotlea
Serratlfolla
Tortuosa
'allow-berried
$\qquad$ Nice well-rooted plants, from $11 / 2$ to 2 ft .; $\$ 1.00$ to $\$ 2.00$ each.

Varlegated IIolles, of all the most popular gold and silver varie. ties, nice plauts; $\$ 1.25$ to $\$ 2.50$ each.

Ar Nearly all of the above mentioned varieties of Green and variegated Hollies can be supplied to any lieiglut $11 p$ to 10 and 15 ft . the price varying with the bulk and height. Prices range from $\$ 5.00$ to $\$ 50.00$ each.

Cerasns Watcreril, a most beautiful double fowering cherry; $\$ 1.00$ each
Fagns Purpurea Pendula, (weeping Purple Beech), pyramids and standards, up to 10 aud 12 feet; cach, $\$ 3.00$ to $\$ 15.00$. We lave no liesitatiou in describing this as the most inmportant addition of hardy ormamental deciduous trees for many years past. It is as decidedly drooping in growth as the well known grccn Weeping leech, while the leaf color is that of the best form of the Purple-leaved Beech. All Beeches are difficult to transplant and should be severely pruned when planted.
Pyrus Japoniea, (Japan Quince), "Kiap lill Scarlet;" among the numcrons new varieties of this favorite old shrub this variety, raised in Mr. Waterer's nursery, stauds ont conspicuously; $\$ 1.25$ each.
Malus Alba l'lena, new and bcantiful; each, \$1.50.
A smaccata, (Ncarlet Siberian Crab); each, st.00, fowers in spring and an abundance of briglnt and Cherry-like Crabs in Autnmn.
Malus Elise Kathke, (New Weeping Applc), young standards; each, $\$ 1.50$.
Malus Florlbunda, each, 75 cts., selected trees, 81.25 One of the most brilliant of all spriug-flowering trees. It is of moderate stature, and of rather slenderyet free growth. Its long slender slioots are covered from end to eud early in May with blossoms, which are of a rich crimson outside and in the hud statc rescumble wreaths of Cherries, while heing white within they show when expanded a beantin! contrast of color. The tree is worthy of a proninent place in every garden.
Malns Florilomina Atrasanguinea, each, 75 cts., selected trees, $\$ 1.25$ eacli.
Gery bcantiful in bud, being minch darker colored than fioribunda.
Dilus Joln Downle, cach, 75 cts. Very beautifulin fritit.
Malus Pendula, (Weeping Apple) each, $\$ 1.25$
Malus Scheidereekii, each, 75 cts.
1?rus Spectabllis, (Chinese Crab), each, 60 cts Rosea L'lena, (Double Crab), each, 75 cts A cantiful spring flowering tree, the branches of which, when in bloom, may be compared to garlands of double pink Roses.
opliora japonlea Pendila Standards, one of the most character istic of all weeping trees, very'scarce; $\$ 300$ to $\$ 6.00$ each.
Uluns Campestris Houls Van Houtto, a fine new golden leaved Elin, 1250 each.
Weigela Fwa Katlike, a distinct and desirable uew varicty, blooming the whole summer, 75 cts , each.

## Japanese Maples.

## Shipped from Phlladelphia, Pá.

The Japancse Naples are of dwari habit, rarcly growing five or ten feet high, and are entirely hardy in the latitude of New York. The rich and glowing color of the leavesia spring and early summer makes them the most beautiful objects that can be planted on a lawn. A group of thęn during the months of May and June is a sight to be remembered. There are many varietics, all of which I can supply when desired, but the varicties offcred below are the most beautiful and satisfactory of them all, and there is no place so small that slould not have at least one of thesc exquisite dwarf trees. The stoek that I offer is American grown, and is much superior to the eheap imported Japanese stock, which I consider almost worthless.

The above Japanese Maple has beautiful green foliage in the summer, but in the fall the foliage turns to brilliant erimson, making it one of the most striking and bcautiful objeets. It is the most vigorous grower of all the Japanesc Maples and perhaps the most satisfactory. Especially desirable for planting in slirubberies.

OLD SPECIMEN PLANT OF TREE PEONY.-From the English Flower Garden.

## Japanese Tree Pæonies.

Last spring I was invited by one of my customers to see a collection of fifty Japanese Tree Proonies in bloom that I had imported for him from Japan two years before, and if I conld write a description that would give any idea of their beaty the Japanese growers would not be able to supply one-tenth of the demand for plants. I don't wonder that the Japs have a special holiday for risiting the Peony gardens, but I do wonder that we Amerieans who boast of onr education and refinement shoukd be content with the poor and commonplace bedding plants nsually seen in our gardens when sueh superb floral ereations as Japanese Tree Peonies are to be had at a small cost. I have said this before, but the truth is so important to a lover of a garden, and is so little known or heeded, that I must keep on repeating it. The first cost of a fine hardy plant like a tree proony is its only cost and it increases in size and beauty year after year so that a plant that may have only cost fifty cents when purehased may become one in a few years that one wonld hesitate to accept twenty-five dollars for. Such a plant is a Tree lacony. I have seen one that had sixty-six open flowers on it at one time, and read a deseription of another that had over five liundred blooms in one season. Now when it is considered that the blooms range from eight to twelve inehes across, and are of the richest and most lovely shades of coloring imaginable it can be understood what a floral wonder a Japanese Tree Prony may grow into. But one does not need to wait years for enjoyment of these flowers-a majority of the plants will bloom the frrst season planted, and in the second season will prodnce from two to five flowers each. The flowers range in color from pure white to the darkest shade of purple including all shades of searlet, erinson, pink, some in solid colors, some emriously striped or marked. The shades of pink are the softest and most lovely imaginable.

These Tree Piconies must not be confused with common herbaceous Pronies which are so popnlar, instead of dying to the ground every year they make a hard wooded growth and in time become quite large shrubs.
ment. "The The Tree Peony is one of the noblest plants available for the garden; it is quite hardy and flomrishes under the simplest treatannmally in size nitil one plant becones me most astonishing manner, beating blossons the size of dinner plates, and the plantiucreases borders and in nooks backed by Conifers or other shrnbs. Any soil suits it and any position. It will repay those who afford it good treat. as possible and allowed trenched soil and well-rotted mannte, and oceasional top dressings; bit it senta fenam indistirbed as much garien. Watering wenl before and dinring flowering greatly assists int the production of large shapely blooms, and where ninild weather in the spring has bronglit on very early buds, protection of some kind shonld be given from late frosts. The plant is absolutely liardy, bint where it las beeninduced by a mild winter to put forthearly flowers, the buds get an oceasional "uip." Flowering season: May and early in Juve.

1 have a set of Japanese water color drawings of these Preonies which will be sent for examination on receipt of ten cents to cover postage. These drawings must be returned, but if Pæonics are ordered the amount sent for postage will be allowed on the price of the Preonics.

PEEONY BORDER.-From Country Life.

## Herbaceous Pæonies.

I am glad that this good old-fashoned flower is becoming popular again, and if there were nothing to be obtained but the few old-fashioned sorts once seen in every garden their popularity would be well deseryed, but nothing has been improved more than the Peony, and the linglish and Japanese growers have given us varieties that are really superb. Many of them are equal in form and coloring to the finest roses, and some are sweet scented. Their hardiness, ease of eulture and the great size and plentiiulness of bloom make them extremely desirable and effective in the garden or on the lawn. They are most effective when planted in large masses of separate eolors. I have made arrangements for supplying iny eustomers with the best Peconies obtainable in America, Europe and Japan and at the lowest prices consistent with the highest quality. The newest varietios of Peonies from the famons English nursery of Messrs. Kelway \& Son are imported to order. Messrs. Kelway \& Son's catalogue will be sent for examination on receipt of 2.5 cents to cover postage.

## JAPANESE PAEONIES.

## Per doz. Per 100.

Doublo and Semi-wonble Japanese Peonies, in 25 varieties. These are really very eloice and distinet from varieties grown in this country, and will give the greatest satisfaction. At the price nothing so fine can be obtained; each1 60 cents......... $\$ 600 \quad \$ 1500$
Single Japanese preonies, in 25 varieties. The finest single Pronies undoubtedly come from Japan. They are equal or superior to single sorts conring from Europe, eosting three times as much; each 70 cents..

TALL ENGLISH DELPHINIUMS.-From Photograph.

## TALL ENGLISH DELPHINIUMS.

I am tempted to say that the Improved English Delphiniums are the most beautiful hardy plants in enltivation, but I am also tempted to say this of a seore of other things, and, of course, it is impossible to say which is the most beautiful of hardy plants, for they have such an immense variety of beauty that the wonder grows that people continue to plant bedding plants by the million which have little or no beauty, are an annual expense, and cost quite as inuch as hardy plants whose first cost is their only cost and which inereases in size, in beauty and oiten in quantity year after year. . These Delphiniums may not be the most beautiful liardy plants, but they are among the most beautiful, and nothing can be more distinet and satisfactory. They are stately and picturesque, some varieties growing eight feet ligh in rich soil, they have immense spikes of most beautiful flowers of every imaginable shade of blue and their season is a long one; in fact, they will bloom from spring till fall if properly treated.

Hitherto it has been impossible to get satisfactory varieties and plants of English Delphiniums; in fact, no nursery in this country has had a satisfactory general stock of hardy plante, and I have lad the greatest difficulty in getting the plants speeified for my landscape gardening work, as this elass of plants is extremely difficult to import. The diffieulty became so great and my work was so hampered by the lack of plants to carry it out that I persuaded one of my most capable horticulturists in this eountry to start a hardy plant nursery and guaranteed the financial results. It is the intention to make this nursery a model of its kind and grow everything in hardy plants worthy of culture and to send out mothing but well grown plants packed in the most careful manner. The Delphiniuns described on next page are one of the offerings of this nursery (The Springdale Nursery)

## CULTURE OF DELPHINIUMS.

The culture of Delphiniums is exceedingly simple, and the results out of all proportion to the slight amount of care necessary. They thrive in almost any position, and mav be planted at any time of the year, provided that in summer the plants are not ton forward, and that they be well watered if the weather be dry; the soil may be a rich friable loam, which suits them finely, but any soil, even hot and sandy, if well watered and manured, will give exeellent results. Dig deeply-trenching is better-add plenty of well-rotted inaunre, and plant about $2 \frac{1}{2}$ feet apart. Placed in lines, as a background to a boarder, or in groups of say three plants at intervals, the effect of the Delphinium is exceedingly fine. They look well in beds also, arranged at the same distance apart each way. They are grand grown in masses of large groups of separate colors, and may be associated with shrubs with great advantage, succeeding by their robustness well in shrubberies. A succession of flowers may be expected from spring to early autunn, especially if the spikes which have done flowering early be eut down to the ground; fresh growth will then be produced, whieh will give blossom. Copious watering in summer will be attended by increased size of spike and flower; in fact, in seasons of prolonged drouth water is absolutely a necessity on many soils if the varieties are to

## DELPHINIUMS.-Continued.

exhibit themselves in their true size and beaty of flower and spike. Top dressing is greatly recommended on certain soils, instead of the bare surface of the ground being left exposed to the sun. Some of the neater dwarf alpine and other hardy plants may be utilized to plant between and around Delphiniums. Coal ashes strewn over the crowns will protect the plants from sluga through winter and spring. As we have intimated, any garden soil suits the Delphiniums ; it is however, necessary to secure sorts such as are offered below, in order to obtain an effect superior to that afforded by the old smaller-flowered varieties. No amomit of liberal treatment will cause the smaller flowered kinds of a few years back to develop into the gorgeous hybrids of to-day.
"The Dephiniums were the first thing that attracted my attention, for they were just at their best and there were jnst about one aere of them. They made such a sight ass I shall not soon forget, so vast was the quantity in bloom, so grand the spikes, and so rich and varid the different shades of bhe. Athongh I have been a grower of these lovely hardy border plants for some twenty years, I was not prepared to see so much improvement in color. and was much struck with the intensity of the shade in many varieties as compared wilh the old Betla Domna. The varieties which have a shade of bronze in the center are also very fine, the contrast between the bronze center and the deep blue exterior being very striking. But the shades of eolor in many of the newer sorts almost bafle description, and 1 shall not attempt it. It is in the donbles and semi-doubles that the greatest advancement has been made. and many of them are truly lovely. They are much larger and more compact than the oll donbles of the Ramunculoides type, and consequently are much more valuable for ordinary garden adornment. The light hlue flowers with the large white eyes are very striking, and of this section Britannia is, I think, the very best Delphiniun I ever saw. * * * The Delphiniums do not reecive any speeial treatment here, being simply planted on a strong loany soil in an open position. Some few were tied to stakes, but the majority do not require it, beirg so dwarf in comparison with the old sorts. This dwarfness of habit is a great gain, and the greater portion of the plants were not more than four to five feet high, yet carrying immense spikes of large bloom."-The Gurdening World.

## SPECIAL OFFER OF IMPROVED ENGLISH DELPHINIUMS.

I want every one who receives this price list to try these improved Jinglish Delphiniuns, and to that end offer them at extremely low prices. I guarantee that they will give unqualified satisfaction in every instance and will be a revelation of beauty to most people.

## FORMATION OF LAWNS FROM SEED.

The ground should be thoroughly drained and well prepared. The soil ought not to be too rich, as a rapid growth is not wanted in the grasses of a lawn: but the surface should be as much alike in quality as possible. After sowing, the ground should be rolled in order to press the seed firmly into the soil. The proper time to sow grass seed depends, of course, upon the latitude. In the Central and Eastern States from March 85 to April 15 is the best time. Seedmay also be sown in the fall, provided it is done early enough to secure a good, strong growth before winter sets in. The sowing should be done when the ground is moist, or before an expected rain, and a subsequent rolling is always advisable.

Rolling.-As soon as the frost is out of the ground in the spring, the land should be gone over with a heavy roller. Winter frosts loosen the soil, and rolling is necessary to compress it again. If grass seed is to he sown, this should be done first and the rolling immediately afterwards. Frequent rollings are recommended.

Mowang. - All turfforming grasses are improved, both in vigor of root growth and in fineness of texture, by frequent mowings. It is impossible to say just how often the grass should be mown, as that depends upon the rate at which it grows. Too close cutting should be guarded against, however, especially during the hot summer months, when the roots require some top-growth to protect them from the burning sun. A good top-growth is also necessary to protect the roots from severe winter frosts. Mowing should therefore be discontinued in time to let the grass grow pretty long hefore winter sets in.

To Grass a Bank or Terrace.- For each square rod, take a pound of lawn grass sced and mix it thoroughly with 6 cubic feet of good, dry garden loam. Flace in a tub, and add liquid manure, diluted with about two-thirds of water, so as to bring the whole to the consistency of mortar. The slope must be made perfectly smooth, and then well watered, after which the paste should be applied, and made as even and as thin as possible.

I can supply the best quality mixed lawn grass seed at $\$ 2.50$ per bushel. (Shipped Irom Cincinnati.)

LILIUM SPECIOSUM ALBUM.-See page 6.

JAPANESE IRIS FROM A PHOTOGRAPH TAKEN IN A FAMOUS BOSTON GARDEN.

The Japanese Irises are without question the most unique and beautiful hardy plants in eultivation. What the Orchid is to the eonservatory the Japanese Iris is to the garden, and it is perfeetly hardy and of the easiest eulture. I eannot understand why millions of Geraniums and other eommonplaee beddiug plants are used annually in this eountry and the exquisitely beautiful Japanese Iris is rarely seen. Men build expensive eonservatories to house plants not half so beautiful or so rare. Yet the Japanese Irises are as low prieed as the poorest bedding plants, as hardy as oak trees and as easily grown as anything that can be planted. In a few of the finest private plaees in Ameriea, they are grown by the hundred and thousand. Nothing in these places ereates more enthusiasm and admiration, not even a greenhouse full of Orelids in bloom.

## Japanese Iris.

Three years ago, a set of Japanese Irises (Iris Kxmpferii) were sent to me from Japan to test, whiel were said to be identieal with the colleetion in the Royal Gardens. I eannot voueh for this statement, as I have never been in Japan, but I have never seen another colleetion in Ameriea or Europe that would equal it in any way. The eolleetion eontained many eolors and varieties I had never seen before, and the flowers were of remarkable size and beauty. When these Irises were in bloom they exeited the greatest admiration and enthusiasm, and it was hard to eonvinee people that these unique and exquisitely beautiful flowers were as hardy as apple trees, and as easily grown as potatoes. They will thrive in any good garden soil, but if the soil is made very rieh and deep and flooded with water for a month before and during their blooming season, they will produce flowers of wonderful size, sometimes ten to twelve inehes aeross. These Irises should be planted in full exposure to the sun.

As the Japanese names are unintelligible and impossible to remember I have renamed this colleetion.

## JAPANESE IRIS.-Continued.

## PRICES OR JAPANESE IRIS.

Named varieties described below, 35 cents cach; $\$ 3.50$ per dozen; $\$ 6.50$ per $25 ; \$ 20.00$ per 100 .
Set of 30 newest varieties from Japan, 60 cents each. $\$ 15.00$ for the set of 30 varieties. This collection has not yet bloomed in this country but contain the newest varicties produced in Japan, and judging from colored drawings sent with them they contain many striking novelties.
American Grown Japanese Iris, in 25 named varieties, $\$ 1.25$ per dozen ; $\$ 10.00$ per 100 . American Grown Japanese Iris. Fine mixed, $\$ 1.25$ per dozen; $\$ 6.00$ per $100 ; \$ 50.00$ per 1,000 .

Allegheny, Double pale lavender striped white, very late.
Wm. J. Matheson. Douhle, reddish plum, base of petal yellow, large and fine.
Ida. Double, light purple blotched with lilac.
Barton. Double, magenta, striped white.
Romola. Single, lilac striped with plum, plum centre.
Springdale. Siugle, bluish purple, sliglatly striped white.
Mrs. Frank H. Hlscock. Single, white margined with pale lilac, delicate and fine.
Yokohama, double, reddish purple; base of petals yellow; late.
Enchantress. Single, pale bluc penciled with dark blue.
Snowdrift. Siugle, pure wlite.
John Marron. Double, white distinctly penciled with blue, blue center; base of petals yellow; late.
Mont Blanc. Double, pure white; large and fine.
W. J. Buttfield. Double, hluish purple; lightly striped white. Vigorous grower and free bloomer. The earliest flowering variety in the collection.
Mrs. James H. Bellantine. Singie, extra large white flower, delicately suffused with pale blue; margin of petals pure white, fine.
Fairy Queen. Single, white; base of petals yellow; maroon center.

Gigantea. Donble; center of petals whitc; heavily margined with magenta. Vigorons grower.
Aurora. Single, white, frcely striped and suffused with magenta,
Venus. Single, lilac freely striped and suffinsed with purple.
Wlllam Falconer. Doublc, rich royal purple; cxtra fine.
John C. Slack. Double, lilac heavily blotched witlimagenta and blue; yellow center distinct.
Cheswlek. Single, large lilac flower bloteled and striped with bluc.
Dollcatlssima. Large double white flower, sometimes slightly tinted with blue; late.
Coquette. Double, magenta, ycllow center, feathered with lilac inclined to sport ; distinet.

James F. Parker. Double, rich dark blue; yellow center; large and fine.
Blue Flag. Double, indigo blue; base of petals yellow. The last variety to bloom.
Mrs. Willlam T. Blodgett. I, arge double white flower; base of petals yellow.
Harlequin. Double, pale blue; base of petals yellow; center of petals white; late.
Edgeworth. Double, light blue, striped white; yellow center; dark blue margin.
Paragon. Large single white flower, freely striped and suffused with maroon.
Distinetion. Extra large double flower; base of petals yellow blotched and striped white and magenta ; distinct.
Moonllght. Donble white flower will yellow center.
Octavia. Single, white, dark center; petals distinctly netted with hlue.
Plerre Lorlllard, Jr. Double, rich purplish plum ; base of petals yellow; large and fine.
Mikado. Rich glowing royal purplc.
Modesty. Single, white, maroon center slightly suffinsed with luaroon.
Dorothy. Single, blue slightly striped with lilac.
Rosalind. Double, light purple freely striped with white.
Kitty. Single white flower slightly suffused with pale blue.
Heart of Gold. Extra large double white flower with ycllow center.
Wm. A. Procter. Double, dark blue; slightly striped white yellow center.
James R. Mellon. Extra large double flower; lilac striped with purplish blue; purple center; distinct and fine.
Hermione. Siugle, whitc, maroon center; petals penciled with blue.
Mrs. Alexander King. Double, blue, frcely veined and suffused with white.
Mrs. Howard Eckert. Single lilac flower striped with magenta.
Samuel W. Black. Single, white penciled with blue magenta center; late.
Robert Scoville. Double, rich reddish plum; basc of petals yellow,

## NEW CLIMBING ROSE.

Wiliam C. Eagan. This is a new, distinct and very desirable candidate for a position in our list of choicest climbing roses. Being convinced of its many excellent properties, I had grown a large stock of healthy young plants, and take special pride in their dissemiuation. It was raised by Mr. Jackson Dawson of the Arnold Arboretum, Boston, Mass., and is the product of Wichuraiana crossed by Gen. Jacqueminot, without any trace of either in the bloom. The habit of the plant is sub-climbing, but vigorous and healthy, with bright glossy foliage. The flower is large and very full, resembling in shape as well as color, the Souvenir de la Malmaison. Although only an annual bloomer, it remains in flower several weeks, and the large trusses of superb bloon are unusually attractive. Mr. Dawson considcred this the best of all his numerous hybrids. It is unquestionably reliable and lardy at the North. Field grown plants, strong and healthy, 2 years each 75 cents; $\$ 7.00$ per dozen.

WALLED GARDEN OF HARDY PLANTS.-From Country Iife.

## Some Notable Hardy Plants.

Elsewhere will be found a very complete list of hardy plants, but the following varieties are especially desirable, and I am in position to furnish them in quantity at specially low prices.

## HOLLYHOCKS.

Have you ever noticed that painters choose single Hollyhocks as subjects for floral painting oftener than any other flower: I suppose the reason for this is that artists have a keener appreciation of beanty than other people and recognize that the common, and I fear sometimes despised single Hollyhoek, is one of the most stately, picturesque and beautiful plants in the world. Nothing ean be more effeetive than a large group or mass of single Hollyhocks, and onee planted they will literally take eare of thenselves, even if planted in the grass. I know of patches that have not been cultivated or disturhed in any way for 20 years. Notwithstanding their great beauty and usefulness, single Hollyhocks are not offered for sale by any nurseryman in Ameriea and the sced is not to be had from any seedsman. I am determined to have single Hollyhoeks for my landscape gardening-work, so I eollected seed from old-fashioned (they will soon be new-fashioned) gardens and had thousands of plants grown for my eustomers. Some people think double Hollyhocks are more beautiful than single. They are mistaken, although the doubles are beautiful, but inclined to be top heavy, often need staking and liable to disease. Hollyhocks planted in the fall will bloom well the following summer.

## SPECIAL OFFER OF HOLLYHOCKS.

## SOME NOTABLE HARDY PLANTS.-Continued.

TRITOMAS.

## TRITOIIAS.

The Tritomas which are variously known as Torch Lilies, Flane Flowers or Red llot Pokers are among the most striking and decorative garden plants grown. They bloom in late summer and fall and are often seen in bloom after hard frosts when everything else has disappeared from the garden. They are not perfectly hardy bnt live throngh the winter in well drained soil if proteeted with a eovering of manure, or they can be dug up, packed in sand and stored in a eold eellar over winter. I offer a fine colleetion of varicties.

Tritoma Uvaria Grandiflora, coral to orange flowers, strong, vigorous grower, per 100, $\$ 1000$
Tritoma Corallina, coral red, very pretty and elegant, eacli zs cts........................................................................
Tritoma 8aundersii, orange-red to deep red, rems rkably fise, each 25 cts.
Tritoma Tucki, deep salmon, fading to nearly white, the earliest of all, each 30 cts
Tritoma Mao Owani apricot, exceedingly prett. small flowers, each 25 cts
Tritoma Rooperi, red tipped, yellow, very lasting and brilliant, broad
Tritoma Nobilis, similar to Grandifora, but stronger and bolder, 20 cts.
each.

## ORIENTAL POPPIES.

I remember very well the first time I saw an Oriental loppy. I was a boy then and it excited me wonderfully, and I thought it the most remarkable flower in the world, and now after twenty-five years have gone by and I have seen almost all the known flowers of the world I am still of the opinion that it is mighty fine, striking and effective, and I have taken the trouble to gather up and have grown a eollection of all the varieties. The flowers are immense in size, often 8 to 12 inches in dianeter. The eolors are salmon pink, orange-red and brilliant erimson-searlet. I offer a fine lot of plants in mixed eolors at $\$ 1.50$ per dozen, $\$ 9.00$ per 100 .

## AQUILEGIAS.

All of the single long-spurred Aquilegias or Columbines are extremely beautiful, and a collection of them should be a feature in every garden. Forenost anong these choice plants is our native Aquilegias. If these and other choice hardy plants were as well known as bedding plants the day of geraniums, coleus and other commonpkee plants would soon be over. The flowers of these Aquilegias are most lovely and delicate, ranging from white to erimson, including shades of blue and yellow, assorted varieties ; each 15 cts.; $\$ 1.25$ per doz. $\$ 9.00$ per 100 . For complete list of varieties see general list of hardy plants.

## AGROSTEMMAS.

These plants are extremely desirable both on aceonnt of their beatiful silvery foliage and their charming rose-tinted, crimson or white flowers, which are fine for cutting. A splendid stoek of plants ; each 15 cents ; $\$ 1.25$ per doz. $\$ 9.00$ per 100 .

## LIATRIS PYCNOSTACHYA.

The popular name of this striking plant is Kansas Gay Feather. Nothing can be planted that will attraet more attention on account of a very unusal appearance, but it is very beautiful as well as odd. It blooms in mid-summer and throws np long narrow spikes of riel purple flowers whieh last a long time; a pecularity of this plant is its great attraction for butterflies ; 15 eents each ; $\$ 1.50$ per dozen ; $\$ 10.00$ per 100 .

## SCOTCH THISTLES.

My curiosity led me to grow a lot of Scotel Thistles, and I found they were the most deeorative plants I had in my garden. They are bold and fine in form and the leaves look as if they were plated with silver. They grow four to five feet ligh and produce in June large purple flowers. They are biennials and die the seeond year immediately after flowering, but are renewed annually from self-sown seed;25 ets. eaeh; $\$ 2.50$ per dozen.

## IMPROVED GAILLARDIAS.

I consider the Gaillardia one of the most beautiful and desirable hardy plants in cultivation, and have liad a large stock of Kelway's famous strain grown for my eustoiners. I offer these plants for less than they have ever before been sold either in this country or in Furope.

Though such an ornamental addition to the herbaccous border, the perennial Gaillardia is content with exiremely simple treatment. Dig the soil theoply and emrich with wellrotted manure. We recommend the (haillardia for bedding purposes as well as for borders; give a moderate amount of room and peg down, and a grand effect is to be obtained. Evergone will have noticed how grandly Gaillardias have thriven through the recent drontlis; they seem hardly to need water, but we recommend watering liberally to insure the finest. flowers. The Gaillardia which Kelway \& Son lave been so successful in improving and popularizing is, of course, simply invaluable as a cut flower on account of its being so lasting when gathered, and so briltiant and beatiful. The gay blosoons are obtainable in perpetual profusion from June to November, and the greater the drought and scarcity of other flowers, the more the utility of the peremuial Gaillardia is demonstrated. Mr. Robinson, in the "English Flower Garden," recommends that they should be phanted in bold groups, and remarks that no plants liave fincer effect in a bed by thenselves, and we quite agree with him. Extra strong fine plants in a splendid assortment of colors. 15 cents each; \$1.25 per dozen; $\$ 7.00$ per 100 .

BOWL OF GAILLARDIA FLOWERS.-From "The Garden."

IMPROVED GAILLARDIAS.

## $\ldots$ HIBISCUS MOSCHEUTUS.

I wish to call attention to this extremely showy and satisfactory plant. It grows wild in the Jersey swamps, but thrives in any garden soil and is equaly desirable as a garden plant or naturatized along the edges of brooks and ponds, or planted anong widd or cultivated shrubs. It is of the easiest culture and will thrive in ahmost any position. The plant grows four to five feet high, is very bushy, and in Augnst and September is covered with immense single flowers six or leight inches across, ranging from pure white to deep rose in color.

Perdoz. Per 100.
Hiblscus Moscheutus, in separate colors, white
blush pink and deep rose; cacli is cents............... \$ 50 \$1000 Hibiscus Moscheutus, mixed colors, strong plants
at a specially low price.........................
PYRETHRUMS.
The Pyrcthrums are so simply and easily cultivated that they may be recommended to all who possess a garden, whether small or large. They are perfectly hardy, and absolutely invaluable for cut ilowers through the summer and autumn months; the flowers are bright and elegantly born on long stems most convenient for vase decoration. In form the double varieties are somewhat Aster or Chrysanthemun-like, and as their chief beauty is in the months of May and June they may be well designated "Spring-Chrysanthemmes," possessing the advantage over the Chrysanthemums of being able to withstand the severest winter withont protection. The single-flowered varieties are veritable "Colored Marguerites," and possess a range of eolor and hardiness that Margnerites might envy in vain. Nothing can surpass the Pyrethrum for profusion of flower in the season; flowers succeed flowers without stint, and the blossoms are not injured by storm or sun. Their position should be the border or in beds. The plants may, with advantage, be cut dowis after June, which will keep up a greater succession of bloom through the antumn. Pyrethrums grow freely in any ordinary garden soil; a good rich loan suits them perhaps lest, and in order to secure size, brilliancy, and number of flowers, plenty of ordinary well-rotted manure may be added to welltrenched, well-drained soil, and plenty of water may be given when they are in bud in the dry summer
(Continued on next page.)

## PYRETHRUMS.-Continued.

weather. A mulching may be applied in dry localities with advantage. The older varieties have been greatly improved upon during the past 10 or 15 years, which is the period during which Kelway \& Son have made them a specialty, and the refined shape and brilfiant or soft shades of the newer sorts, have caused the P'yrethrum to become deservedly popular. I offer a splendid lot of plants of the choicest single varieties, grown from Kelway's famous strain, 20 cents each; $\$ 1.75$ per doz; $\$ 10.00$ per 100 .

TUFTED PANSIES OR ABEDDING VIOLS.

## PENSTEMON TORREYI.

This very fine lardy plant is but little known; hut is one of the really good things that shonld be in every garden. The plant grows from four to six feet high, and is covered with its showy crimson flowers all throngh the summer. 15 cents each; $\$ 1.25$ per dozen; $\$ 8.00$ per 100 .

## POLYANTHUS, OR COWSLIP.

This charming spring blooming plant belongs to the Irimrose family, the hardy varieties of which are so very popular in England, but are rarely scen in this country, owing partly to an impression that they cannot be grown in this climate. This is a mistake, as they do very well here. For the front of borders and shrubbery, for spring bedding, and for naturalizing in moist and partially shaded places, nothing can be finer. The coloring in the flowers is especially rich and fine.

At this writing I have a long border of these plants in bloom in my garden, and uothing gives me greater pleasure. They are so charning in habit, rich and varied in coloring, and so early to bloom, coming with the spring flowering bulbs, that nothing can be more acceptable. I use them freely for decorating the dining table and library windows, taking plants up from the border and putting them in fern dishes and pots where they go on blooming as if they had never been disturbed. Their hardiness has been pretty well settled by the severe winter of 1898-99. The minimum temperature at my country place was twenty-four degrees below zero. Not a single Polyanthus was injured, and they were planted in wet soil at that. Price, 15 cents each; $\$ 1.00$ per dozen; 8.00 per hundred.

## FOXGLOVE (Digitalis)

In England the Foxglove grows wild, but notwithstanding tbis it is a great garden farorite, as it well deserves to be. For stately and picturesque beauty it is not to be surpassed, and planted in masses in the garden among shrubs or naturalized on the edge of woods, in the orehard or along brooks, it is extremely effective and satisfactory: Strictly speaking, it is a biennial, but as it renews itself from self-sown seed it may be treated as a perennial. Mr. Falconer has naturalized thousands of Foxgloves in Schenley Park, and nothing he has planted attracts more attention and admiration. Planted in the fall, Foxgloves will bloom well the following season. I offer a fine lot of strong plants grown from the best strains obtainable in Europe; 15 cents each; $\$ 1.25$ per do\%en; $\$ 5.00$

FOXGL.OVE.-From the English Flower Garden.

## DIANTHUS BARBATUS (Sweet William).

That old-fashioned favorite, the Sweet William, has almost disappeared from our gardens, more's the pity, for its place has been taken by plants of far less beauty. I am glad to note the rapidly waning popularity of the commonplace and vulgar bedding plants, and when they are entirely discarded as they surely will be, and hardy plants take their place, our gardens will again have the charm of loveliness
and the individual picturesqueness of former days. The Sweet William is a fine oid plant which produces great masses of bloom of extremely rich ard varied colors. The flowers are very lasting and fine for cutting. The plants offered are grown from the finest strain to be obtained in England where hardy plants are universally grown and where new and improved varieties are constantly being produced. Fine large plants ; 15 cents each ; $\$ 1.25$ per dozen ; $\$ 8.00$ per 100.

## DELPHINIUM FOKMOSUM

In the perennial Delphiniums or Larkspurs we have one of the most beautiful and useful families in hardy plants. The old Delphinium Formosum is one of the few hardy plants which has been pretty generally offered by the plant trade; yet it is comparatively unknown, although few things can be planted that will give more satisfaction whether the object is decorative effect in the garden or flowers for cutting for the house. Messrs. J. H. Small \& Sons, the leading florists of New York and Washington, have made quite a hit with it as a novelty in cut flowers. The flowers are intense deep bluc, perhans the most brilliant blue to be found in flowers freely produced in long spikes; blooms in June and July and continues for a long time in bloom, and if the plants are cut back after flowering will bloom a second time in the fall. The plants grow to four or five fect in height, and if planted in masses about two feet apart will produce a splendid effect. 15 cents each ; $\$ 1.25$ per dozen; $\$ 8.00$ per 100 .

## PHI_OX, "MISS LINGARD."

The hardy Phloxes are well known as the most desirable of hardy plants, and the variety Diss Lingard is mondoubtedly the best Phlox in cultivation. It produces immense heads of beautiful white flowers in June and bloom again in September and October. It has the best foliage and habit of all Phloxes, and is entirely free from attacks of red spiders ; $\$ 1.50$ per dozen ; $\$ 10.00$ per 100 .

## HEMEROCALLUS AURANTIACA MAJOR.

This is a new Japanese plant and is, undoubtedly, one of the lest hardy plants of recent introduction. Almost everybody knows the old Yellow Day Lily which is deservedly popular. This new variety is incomparably finer. The plants are more vigorous and of finer outline, the flowers are double the size, of splendid form and great substance and a beautiful rich golden yellow in color. I have fully tested this plant in my experimental grounds and am greatly pleased with it. An importation secured direct from Japan enables me to offer it at a moderate price, 50 cents each ; $\$ 5.00$ per dozen.

## MONTBRETIAS.

The Montbretia is one of the brightest and best of sum-mer-flowering bulbs, and it has been a matter of wonder to us why it is not more generally used. We feel sure that if once tried they would become firm favorites. The bulbs should be plented from April to June in clumps or groups of three to a dozen or more. They are perfectly hardy, and once planted can be left to care for themselves. In growth they resemble the Gladioli, and produce spikes of the most brilliant flowers in the varions shades of orange, yellow, red, etc. 30 cents per dozen ; $\$ 2.00$ per 100 .

## HYACINTHUS CANDICANS

A snow-white summer flowering Hyacinth, growing 3 to 5 feet in height, gracefully surmounted with from 20 to 30 pure white bell-shaped flowers. 5 cts. each ; 50 cts. per doz.; 33.00 per 100.

## PLATYCODON MARIESI.

A valuable dwarf variety, bearing deep blue bell-shaped flowers, nearly three inches across, for a long season in late summer and early autumn. One of the finest of border plants. The unopened buds are nearly as beautiful as the flowers themselves, and are particularly interesting in their peculiar shape. 15 cents each ; $\$ 1.50$ per doz. ; $\$ 10.00$ per 100 .

CREEPING PHLOXES.-From Country Life.

## CREEPING PHLOXES.

The creeping Phloxes are among the most charming of hardy plants. They cover the ground with a mat of evergreen foliage at all times and during the month of May make a most beautiful carpet of white or pink flowers. The bloom is so dense that the foliage is cutirely hidden. This Phlox blooms again in the fall, but not so frecly. It is very useful for border cdging, rock work or covering bare banks.

## BLACKBERRY LILY.

Pardanthus Sinensis. Lily-like flowers of a bright orange color, spotted with red, which are succeeded by seeds that resemble blackberries. Very showy and desirable. 10 cents each; $\$ 1.00$ per doz.

## HELIOPSIS PITCHERIANUS.

A desirable, lardy herbaceous plant, growing from 2 to 3 feet high, and a perpetual bloomer, beginning to flower early in the season, and contiming in bloom the entire summer. The flowers are of a beautiful dcep golden-yellow color, about two inches in diameter, of very thick texture, and are very graceful for cutting. 15 cents each ; $\$ 1.25$ per doz.; $\$ 8.00$ per 100.

## PHLOX DIVARICATA CANADENSIS.

One of our native varietics that is but rarely met with, and which has been introduced in Europe the past few years as a novelty. A plant that is certain to meet with much favor when better known, as nothing can produce such a cheerful corner in the garden in the very carly spring, frequently beginning to bloom early in April, it continues until about the middle of Junc, with large bright lilac-colored flowers, which are produced on stems about 10 inches high, in large sliowy lieads, and are very fragrant. 10 cents each; $\$ 1.00$ per dozen ; $\$ 6.00$ per 100 .

## VIOLA CORNUTA.

These plants are sometimes known as Horned Pansies. They are the most satisfactory of the violet family, perfectly bardy; they produce their beautiful purple or white flowers in the greatest profusion early in the spring, sometimes in March and continue in bloom until extremely hot summer weather comes on. The flowers are as large as small pansies and are thrown well above the foliage, which is neat, compact and beautiful.

Each. Per doz.
$\begin{array}{cccccr}\text { Viola Cornuta, blue ...... .............................................. } 15 & \$ 150 \\ \text { " } & \text { " } & \text { Alba, white.................................. } & 20 & 200 \\ " & \text { " } & \text { "Purple Queen,"pale lavenderpurple } & 15 & 150\end{array}$

## HARDY ASTERS.

Especial attention is directed to the value of IIardy Asters, both for garden and naturalizing. They are of the easiest culture, and make a wonderful show of bloom in late summer and fall when very few other things are in bloom. I offer a splendid collection at $\$ 1.50$ per dozen ; $\$ 8.00$ per 100 .

## HELIANTHUS LOETIFLORUS.

The best of the summer blooming variety of hardy sunflowers; flowers 3 inches in diameter and freely produced. Plant grows 3 to 4 fect high and spreads rapidly. Fine for cutting, for the border and for planting among shrubs. 15 cents each ; $\$ 1.25$ per doz.; $\$ 7.00$ per 100 .

## CLEMATIS RECTA.

This charming plant is almost unknown in this country, although a great favorite in England for a great many years. This Clematis has flowers almost identical with the popular Clematis Paniculata, but instead of being a climber it is a dwarf herbaceous plant, growing about 15 to 18 inches high, and blooms in June instead of September. I have known and admired the plant for several years, but until recently have never been able to secure suflicient stock of it to offer for sale. P'rice, 25 cents each ; $\$ 2.50$ per dozen.

## LYCHNIS FLOS CUCULI.

This is one of the most charming dwarf hardy plants in cultivation. It is literally covered in May and Junc with jts lovely pink flowers, and if the old flower heads are cut off will bloom again freely in September. A large bed should be included in every garden. Fine for cut flowers; $\$ 1.50$ per dozen ; $\$ 5.00$ per 100 .

(Herbaceous Perennials.)

Until hardy plants come into general use we cannot hope for artistic, interesting and beautiful gardens in this country. People of taste and eulture are realizing the ugliness of the stereotyped bedding with lines of color, and will no longer allow their lawns to be daubed with a flower garden like a colored lithograph, althongh many of our public parks are still guilty of this atrocious work. With the material offered in this list the most beautiful and interesting gardens are to be made, gardcus that increase in interest and beauty year after year; gardens that change their aspect with every change of season. To make garden with hardy plants and shrubs requires far more taste and knowledge than it does to make one with the few varieties of bedding plants generally used, and the majority of gardeners do not lave this knowledge and no idea of proper arrangement. But the garden of hardy plants has this advantage, the individual beauty of the plants themselves is so great that a garden cannot fail to be interesting and lovely, no matter how badly arranged, if the eultural skill is sufficient to bring them to perfection. People desirous of having really fine gardens will find William Robinson's book, the English Flower Garden, most helpful. It is the best and most comprehensive book ever written on gardening. Every plant and shrub worthy of consideration is described and cultural directions given, several chapters are devoted to the arrangement of gardens, and the book is profusely illustrated with pictures made in the best gardens in England. This book is not gencrally on sale, but can be ordcred througli any bookselfer.

Hitherto it has been impossible to get satisfactory varieties and plants of Percnnials, in fact, no nursery in this country has had a satisfactory general stock of hardy plants and I have had the greatest difficulty in getting the plants specified for my landscape gardening work, as this class of plants is extremely difficult to import. The difficulty became so great and my work so hampered by the lack of plants to carry it out that I persuaded one of the most eapable horticulturists in this country to start a hardy plant nursery and guarantced the financial results. It is the intention to make this nursery a model of its kind and grow everything in hardy plants worthy of eulture and to send out nothing but well grown plants packed in the most careful manncr. Most of the plants described below are the offerings of this nursery. (The Springdale Nursery.)

## Polyanthus or Cowslip-See.page 20.

## SPECIAL OFFERS OF HARDY PLANTS IN VARIETY.

The Springdale Nursery authorizes me to make the following remarkably low prices for hardy plants. They will be of the best and most desirable varieties and the plants of the best quality, but in every instance the selection of varicties is to be made by me, but if purchasers will state the things they have or don't wish these will not be included in the selection.

\end{aligned}
$$

I have a limited number of copies of my lecture, delivered before the Massachusetts Morticutural Society, on hardy plants and shrubs, which will be sent frec on request.

In the following list height and the time of blooming are indieated as follows: Figures following the letter $H$ indicate height in feet, figures following the letter F indicate the number of the month or months the plants bloom in. This is ouly approximate, as height and time of flowering varies considerably with soils, climates and seasons.

PRICES quoted are for not less than half the quantities named, but single plants will be fur nished at followingrates: Plants at $\$ 1.00$ or less per dozen, 10 cents each; Plants at $\$ 1.25$ and $\$ 1.50$ per dozen, 15 cents each; Plants at $\$ 1.75$ and $\$ 2.00$ per dozen, 20 cents each; Plants at $\$ 2.50$ and $\$ 3.00$ per dozen, 25 cents each.

SPECIMEN RHUS COTINUS-l.rom Conntry I,ife.

## NOVELTIES IN SHRUBS.

(Shipped from Station Near Pittsburgh.)

Of the following Slrubs, those marked with an asterisk (*) have been fully tested in this country, and I have seeu them and can vouch for the descriptions. The others come from reputable foreigu sources, and the descriptions of introducer are given. The plants sent out of new varieties of shrubs are always much smaller than those of old sorts.

Crataegus Carrieri. Bcantifnl varicty of thorn, with large, dcep green, glossy foliage, remaining on the tree nintil December, Gives quantity of lange white flowers, turning rosy afterwatds. The fruits are small scarlet Medlars, eatable, having the taste of ant Apple, of the size of a large Cherry. The vice foliage and quantity of fruits make it a very rcmarkable small tree or shrub. Fach, 40 cents.
Cydonia Japonica Columbia. The fruit of this new Japan Quince is said to be edible, measuring 8 to to inelhes in circumference, greenish•yellow, very fragrant. Vacls, $\$ 1.00$.
Cydonia Japonica Maulei Superba. (Japan Quince.) Large bright-red flowers, darker than the C. Maulci; vigorous, bloous abundantly. Each, 85 cents.
Cornus Brachypoda Variegata. The most striking variegated slirub in cultivation, large leaf of grand effect. Eael, $\$ \mathrm{r}, 00$,
*Deutzia Crenata Candidissima. This is not a new slirub, but it is one of the most beantiful of all the Dentzias and is very scaree. It is most beantifnl and should be in every collection. Each, 20 cents; per doz., $\$ 2.00$.

Deutzia Discolor Purpurascens, introdnced from Vinnan, slirub attaining 3 to 4 feet in lieight, branches thin, leaves and dentated racemes 2 to 3 iuches in length; flowers white tinted rose, three-fifths of an inch in diameter, buds red. Beantiful plant. Each, 65 cents.
*Deutzia Hybrida Lemoinei. Beantiful variety, Iybrid of Dentzia Gracilis D. Parvifora; blooms early, regularly; the branches are entirely covered with erect panicles, bearing is to 25 pure white and well-opened flowers, of a new aspeet in Dentzia I. Eaclı, 25 cents; per doz., $\$ 2.50$.
Deutzia Parviflora. small shrnb, reaching hardly 5 fect in height, branches straight, leaves eliptical, dentated and reticulated with dark green; gives a profusion of beautifui white flowers, fine uovelty. Each, 50 ccats.
Deutzia Corymbiflora. A new varicty with thin branches, large dark green leaves, flowers in May and June. snow-white in terminal clusters; sometimes flowering in Augnst aud September. Liech, 85 ceuts.
Forsythia Fortuneii Variegata Aurea, Finc novelty; leaves with a large golden-yellow margiu. Requires to be planted in a sunny place; very vigorous and as free flowering as the type. Each. 35 cents.
Hamamelis Japonica Zuccariniana. (Japanese Wych Hazel.) Leaves dark grecn, flowers lemon-yellow in axillary elnsters, Very curious on account of its being the oniy shrub that will prodnce flowers ont doors iu wiuter time in this conntry. Eaclı, \$1.00.
Malus Florabunda Scheideckerii, (Crab Apple.) This new Crab Apple is a scedling of Malus Florabunda, which I have always considered the uost ornamental flowering small tree in cultivation. This new variety is said to be a great improvement. Each, 75 cents.

## NOVELTIES IN SHRUBS.-Continued.

Philadelphus Falconeri, introduced from China or Japan. Iardy, attaining 9 feet in height, thin branches, leaves snall lanceolate; blooms in small panictes at the end of axillary branches, fowers formed of four sharp-pointed petals. purewhite. Each, fo cents.
Philadelphus Lemoinei (Mock Orange), a fine new sort of 1 . Michrophyllus; very large flowers, highly scented. Fach, 35 cents; $\$ 3.50$ der dozen.
Philadelphus Lemoinei Avalanche. Branches attaining 5 to 6 feet, bent by weight of flowcrs; flowers very large, covering the branches; sweet scented, i superb new sort. IVach, 50 cents,
Philadolphus. "Silver Ball;" fowers large, double, swcet seented, fine; each 30 cents: $\$ 3.00$ jer dozen.
Philadolphus Lemoinei Candelabre, cwarf and free flowering variety; enormous white dentated and undulated flowers, entirely covering the branches; the prettiest variety obtained. Facls, 75 cents.
Philadelphus Lemoinei Erectus, forming an erect oush: the branches are entirely covered with little flowers of the purest white and very fragrant, Kaclı, 30 cents.
Philadelphus L moinei, "Sheaf of Snow:" enormons fowers of the pirest white, sweet scented; the branches are arched and drooped by the weight and quantity of flowers. Each, 75 cents.
Philadelphus Lemoinoi, "Mont Blanc," attaining 5 feet high; erect branches entirely covered with large, fragrant flowers, liach, 50 cents.
Philadelphus, Species Pekinensis, lately introduced from the nountains of Pekin. Fircli, 60 cents
Rhus Cotinus Atropurpureus. This is a marked improvement on the well known l'urple Fringe which I have al way's considered on the well known Purple fringe which have al ways considered
one of the handsomest shrubs in cultivation. This shribbinakes onte of the handsomest shrubs incultivation. This shrub inakes
a spleudid specimen. The introdncer describes the plumes as a spleudid specimen. The introdncer describes the plumes as scarlet, which is hardiy true, bint they are mut
than those of the old variety. Each, 50 cents.

Rubus Sorbifolius. A Japanese Raspberry, hardy, producing large handsorue, luscious fruit, resembling in size and form the straw berry; red in color, and of sprightly sub-acid pleasant tlavor Large white Howers, fragrant. Each, 25 cents.
Rubus Xanthooarpus, raspberry, introdnced from China, forms a dwarf crect bush, 1 foot high; ornamental foliage; fruit yellow. aciduons flavor. Fach. 25 cents.
Sambucus Racrmosa Tenuifolia. Reautiful hardy variety, with finc deeply cut green foliage. The plant in its aspect nuch resembles some varieties of the Japanese Maple. and may replace them in countries where these nice shrmbs do not thrive well Vach, 75 eants.
"Sambucus (1:lder), Nigra flore rosen plena, very vigorous shrib, witll donble-rose flowers; awarded a silver medal at the Antwerp Finlibition, Fach, 25 cents.
Viburaum Dillatatum, not new, but very scarce; one of the best of the Viburnums: grows 8 to 9 feet high: small white fowers in Junc. The fruit is beantiful orange-red and ripens in september. Facli \$s,00.
Weigela Eva Rathke, a new, ever-blooming Weigela of great beanty; vigorons, and flowers all summer; large fowers, crimson red, A great acquisition that will becone inmensely popular l:ach, 40 cents: per doz., S4.00, Stronger plants 75 ceuts each.
Welgela Conquete, Flowers cnornous. The largest fowered variety, deep rose, measuring $1 / / 2$ to 2 inches across. 75 cents each.
Weigela Pracox, Japanese sort, vigorous, branches crect, fowers carmine-rose, throat matked with yellow stripes; blooms 3 to 4 weeks before the other sorts. 75 ccuts each.
Weigelia Mont Blanc, extremely vigorous, flowers very large pure white, mucl superior to other white floweriug varieties. Fiach. 25 cents.

## A Few Shrubs of Exceptional Merit.

All of the shrubs offered in the general list that follows are desirable, and have their special uses, some of them are as fine as any described below, but are too well known to need special description, but no grounds are so small that should not include all of the following.

Hypericum Moserianum. This, on acconnt of its pecnliar appearance and dwarf habit, might be considered a herbaceons plant instead of a shrub. planted in groups, beds or masses it is extremely effective, and is in bloom throngliont the summer and fall. The flowers are 2 inches in diamcter, of a rich golden-yellow color, and very desirable for cutting. The plant does not grow ower 15 or 18 inches high, and should be planted nbout 15 inches apart. Each, 20 cents; per dozen, $\$ 2.00$; per 100, \& 12.00 .

Berberis Thunbergii. The nurserymen all unite in praising this splendid shrub, and it descrves all the praise it gets, but the price has been kept pretty high. 1 have a large stock grown and offer it at about half current prices, so that my customers can afford to plant it freely. It has every good quality, beautiful habit. fine foliage, frec flowering qualitics, but its greatest charm is the great quantities of crimson berries which it produces in the summer, and which remain on the bushes all winter, making it very effective in the winter landscape, it is also fine for cutting for honse decoration, alnost equal to the holly, which cannot be grown wery well north of Washington or east of Philadelphia. This Berberis makes a splendid untrimmed hedge, and my low prices make it available for that purpose. I;ach, 20 cents; per dozen, $\{2.00$; per 100, $\$ 13.00$; small plants, $\$ 6.00$ per 100 .

Mahonia Aquifolium. A splendid evergreen shrub which shows a variety of coloring in its foliage at all seasons of the year and produces a greal display of bright yellow flowers early in the spring. At times the foliage is as billiant and as rich in color as autumn leaves. It is not often nsed for the purpose, but it makes a splendid hedge. A good exauple of this can be seen on Judge Mellon's gromds in this city. This shrull shonld be planted in'the spring. Each, 20 cents; per dozen, $\$ 2.00$; per $100, \$$ r2.00.
Speaking of shrubs, Miss Jckyl in her book Wood and Garden, says "What a precions thing this fine old Mahonia is, what should we do in winter withont its vigorons masses of grand foliage in gardent and shrubbery, to say nothing of its nse indoors? * Whenone reflects that Mahonia Aquifolum is individually one of the handsomest of small slirubs. that it is at its very best in mid-winter, that every leaf is a marvel of beautiful drawing and construction and that its raddy winter coloring is a joy to see; and further when one remembers that iuspring the whole picture changes-that the polished leaves are green again and the bushes are full of tufted masses of
brilliant yellow bloom and fuller of bee-music than any other plant then in flower. that is in one or other of its varied forms of beanty thronghout the year."

Cephalanthus Occidentalis. This splendid native shrub is almost unknown and has never been pushed by the nurserymen, althongh scores of inferior things have been praised to the sky, and sold by the thousands. It is really unique, there being no other shirnb at all lake it. The folinge is Iuxurant, bold and finely colored, and the white flowers which are produced freely in Jnly, when almost no other shrub is in bloont, are remarkable, being perfectly ronnd in shape, and abont 2 inches in diameter. They are sweetly scented. This is an excellent shrub for general planting that I camot commend too highly, and like most native shrubs is of the easiest culture. 20 cents each; $\$ 2.00$ per dozen; $\$ 12.00$ per 100 .

Rubus Odorata. This is the flowering raspberry which grows wild by the tens of thonsands in many parts of this conntry. I want to call especial attention to it, for nothing can be better for covering steep and partially shaded banks. It does best on moist north lilllsides. It makes masses of most pleasing and effective foliage and its large purplish red flowers are produced all summer. Each, 20 cents; per dozen, $\$ 1.25$; per roo, $\$ 8.00$.
Since the above was written I have tested the shrub in my experimental grounds, and have fonnd it one of the most beantiful shrubs in my collection and one of the easicst culture. If it never bloomed, its foliage wonld make it entircly satistactory, it was planted in full exposure to the sun iu ordinary garden soil.
Rhus Cotinus. This is a common old shrub that almost everybody knows nuder the name of "Purple Firinge" or "Smoke Tree," but it is almost never seen in perfection on account of being ruined by pruning. In good soil, and allowed to develop naturally, it in time makes one of the finest things imaginable, which is well shown by the illustration taken from Country Life. İach, 25 conts, per dozeu, 2.50 .
Spirma Lindleyana. A noblc shrub of most striking and picturesque habit that is distinct from all other Spiraas, It is rarely seen, but should be in every collection. In a favorable soil and sitnation it will grow $6 \cdot 108$ feet high. The graceful foliage is

## A FEW SHRUBS OF EXCEPTIONAL MERIT.-Continued.

finely divided and delicate grcen, the flower clusters large, white and plime-like, being at their best about the middle of Angust. like nany other plants it has in some soils peculiar ways, and in others, especially of a warm nature, it blooms well enougli to cleserve the epithet superb. In cool soils I have noticed it does not always attain the grand flowering state which is shown by the great long plimes of flowers it bears in warin soils. Where the soil is too cool it seems to spread more at the root, but in all cases it is beantiful for its foliage and laalsit. Eaclı, 25 cents; per dozen, \$2.50; per linntred, $\$ 5.00$.

Aralia Japonica. For form and foliage there is nothing quite equal to this splendid Japanese Aralia. It is as picturesque as a fine palm, and being perfectly hardy, effects can be produced with it in the garden not to be obtained in other ways. It produces large spikes of white flowers in September, followed by great bunches of black berries. It is altogether one of the finest things I know of, but to have it in perfection it should be planted in deep rich soil and every two or three years cut back to the ground. Fiach, 50 cents; per dozen, $\$ 5.00$.

HYPERICUM MOSERIANUM.

Exochorda Grandiflora (Pearl Bush). This is one of the finest shrubs of its season (May) and when in bloom is covered with its lovely white flowers. This slirub has always been scarce and high priced, but I have secured a large stock which I can offer at a low price. When planted, fully two-thirds of its top shonld be cut off. Fach, 20 cents; per dozen, $\$ 2.00$; per hundred, \$14.00.

Geniata Scoparia (Scotch Broom). To the casual obscrver, this shrub appears to have no leaves, as, being so few and small, they are not particularly noticeable. The stems and branches are of a bright green color, standing in strong contrast to other plants. The flowers are yellow, pea shaped, and completely cover the plant, opening during the last days of May. North of Pittsburg, it requires some protection, and even here it is sometimes partially winter-killed, though never enough to prevent its blooming the succeeding summer. Fach, 20 cents; per dozen, 81.50 ; per hundred, $\$ 8.00$.

## Gardening Books and Papers.

I an sorry to say it, but there is at present no gardening paper published in America worthy of consideration. For a few years we had an excellent paper, well suited to the needs of our country. Its editor was able and enthusiastic, and had the business management been as intelligent as the editorial the success of the paper would have been unqualified, but the editor was allowed to resign and the paper dropped into the uninteresting rut occupied by its contemporaries. This is preliminary to recommending the English paper. The Garden, which is beyond question the best gardening paper published in the world. It is a weekly, well edited, well printed and frecly illustrated with pictures made in the best gardens in England. It is really a cheap paper at \$4.50 per year. I will be glad to forward subscriptions to the London office for my customers.

Another English paper that gives me a great deal of pleasure is Country Life. It is a 32 -page weckly exclusive of advertisements, and is the best printed and illustrated paper I have ever seen. It treats of all purstits and spurts of conntry life, but is especially interesting on account of its illustrated descriptions of English country places, one of which it publishes each week, showing house, gardens and lawns. My attention was called to this paper recently by one of my clients, and I was so well pleased with it that I bought all the back numbers as well as subscribing. The price for American subscription is $\$ 10.00$ per year. I will forward subecriptions if desired.

The best book on gardening ever published and worth more than all other books on gardening and landscape gardening is Wm. Robinson's The English Flower Garden, now in its cighth edition. Whatever success I have made as a landscape gardener I owe to the inspiration of this book. It not only teaches good gardening, but what is quite as important, condemns bad, giving reasons that are convincing for both. This book has done onore to improve the gardening in England than all other influences combined, and I wish it were in my power to secure its reading by all thoughtful intelligent people in this country. The book is very comprehensive, treating of the arrangement of various styles of gardens, and contains descriptions of almost every tree, shrub, plant and bulb, of value used in ornamental gardening. It is profusely illustrated by the best English artists with pictures made in hundreds of English gardens. The price is $\$ 6.00$. It may be ordered from any bookseller, or I will forward it on receipt of the price.

A delightful book recently published in England is Wood and Garden, by Miss Jekyl. The book hasn't much to say about culture, but is full of good sugges'ions for arrangement, and the illustrations from photngraphs made by the author are a delight, and should do much toward the hanishment of ugly and inartistic gardens. It is charmingly written by an enthusiastic amateur, and should be read and owned by every Inver of a good garden as well as by those who know nothing of the pleasures of a garden. The book can le obtained through any bookscller.

## Grass Seed for Lawns.

I can supply the very best quality of Mixed Lawn Grass Seed for $\$ 2.50$ per bushel. This is exactly the same quality of seed as that usually sold for $\$ 5.00$ per bushet as Central Park mixture, or under some other fancy name. Grass seed weighs only 14 pounds per bushel, and can bc shipped inexpensively by express (shipped from Cincinnati). I do not supply less than one bushel. Special prices quoted for large quantities. Grass seed sold by weight, 14 pounds for a bushel, but 14 pounds of clean grass seed will not fill a bushel.

AZALEA VASEYI.-For description see page 43.

## Ornamental Flowering Shrubs.

## SHIPPED PRINCIPALLY FROM STATION NEAR PITTSBURGH. SPECIAL OFFER OF SHRUBS.

I want to encourage the planting of shrubs. To be effective they should be planted in masses, but when dealer or nurserymen ask fifty cents each for easily grown shrubs there is not much eneouragement to plant them freely. I have made arrangements by whieh I can supply my customers with well grown shrubs in the best varieties at the extremely low prices quoted below, but in every instance the selection of varieties most be left to me, but in ordering if it is stated that certain slirubs are not wanted they will not be sent. I guarantee these slirubs to be satisfactory in both quality and variety.

Anthony Waterer. A beautiful novelty introdnced lately into our collcetions. The "Garden and Forest " thus alludes to it in a recent issue:
"rhis is a seedling of that variety of Spirxa Japonica which is known in gardens as Sp. Bumalda, and which is distinguished by its dwarf compact habit, its persistent flowering, and bright red flowers. compact habil, its persisteriginated in the Knaplill Nelrserics at Woking in England a few years ago, and differs from its parent in Woking, in England anew more intense color of the flowers. As it the deeper brighter, and mower fredy; when only a few inchics high, and continnes to pioduce its large 月at eoryinbs from July until frost appears, this ploduce its large fat eoryinibs fromition to the rather short list of alltuin in-flowering hardy slyrubs." It has reccived a first-class certif cate from the "Royal Horticultural Society." Two year old plants, 25 cents each; $\$ 2.25$ per dozen ; $\$ 17.00$ per 100 .

## Ornamental Deciduous Trees.

The following list of trees is selected from the best nurseries in the United States. Orders will be shipped from the nearest mursery that can supply stock ordered, so as to save freight charges and secure quickest possible delivery; where stock is ordered in cousiderable variety, it is sometimes shipped from two or more nurseries to secure trees of the best qualities. I always endeavor to secure the best stock in the market for my eustomers. The prices quoted are for trees of the most suitable size for transplanting; extra large trees of many varieties can be supplied, but are not recommended. If quick results are desired they can be had by takng extra care in blanting small and mediun sized, but perfectly vigorous and healtliy trees; for instance, dig hole four feet deep and four feet in dianeter for each tree, and fill with all good surface soil, mixed with one-fourth its bulk of rotted stable inanure.

It costs considerable to plant trees in this manner, but the results justify the expense, and people often pay from ten to fifty dollars cacli for large trees, which ahways fail, generally dying outright within three years, and never inaking vigorous, liealthy tress. Some kinds of trees may be safely planted much larger than others, magnolias, beeches, tulip trees and whiteleaved linden are diffeult to transplant, and small sized trees of these should always be seleeted. Some varieties should always be planted in the fall, others always in the spring, and I will be glad to advise my customers on these and other points in regard to planting.

Net lowest prices will be quoted for trees by the 100 and 1000 on application.
Specially desirable trees are inarked with asterisk (*).

Allanthus Glandulosa, female trees, which are almost free from disagreeable odor
Alder, Cut-leaved

## EVERGREENS.

The priees quoted are for trees frequently transplanted and of fine shape, suitable for ornamental planting. When it is desired to make extensire plantations, extremely low prices can be made by the 100 and 1,000 . Evergreens should be planted in the spring. Many seasons they can be planted safely in September, but the risk of shipping at this time is great on aceount of hot weather.

Rare evergreens, not obtainable in this country, will be imported to order.

## SCIADOPITIS VERTICILLATA.

I hare just reecised from Japan an importation of this rare and remarkable evergreen. They are of fine shape and in splendid condition.

HEDGED GARDEN OF HARDY PLANTS.-From Country Life.

## Ornamental Hedges.

Hedges can be nsed to advantage on all suburban and country places, large or small. Where protection against cattle is not needed a woll-kept hedge is far more beatiful than the most costly wall or fence. At Newport, the most beautiful smmmer resort in dmerica, hedges are very popular and are used more than both walls and fences. I have made arrangenents for supplying all the best varieties of hedge plants at extremely low priees.

## TRIMMED HEDGES.

## UNTRIMMED HEDGES.

Untrimmed hedges are allowed to grow naturally without pruning, and as a rule arc not suitable for planting on the bonndaries of grounds, but can be nsed for euclosing flower or vegetable gardens, on the edge of terraces and along roads and walks. Sometimes they can be used to conceal unsightly but necessary fences.

Per 100.
Berberis Thunbergit, (Japanese Barberry). One of the most beantiful shrubs in cultivation either for ltedging or general purposes. It is of a neat compact growth and never need be touched with the shears. The follage is beatstiful at all times, bnt in the fall turns to a most brilliant crimson color. hut its most attractive feature is its fruit. The plant is literally covercd with bright scarlet berries all the tall and winter. It uever grows over abont three feet high. If a low hedge is desired, it can be used for a boundary one. It is finc for the edge of a terrace and along roads and walks; as it is quite thorny. boys and cattle will leave it alone. Plant 15 to 18 iuches apart; small plants
Corchoris Japonica Variegata. This makes one of the daintiest little hodges imaginable. The growth is slender and graceftu, the foliage is of fine form and beautifully variegated, and after the leaves drop in the fall the twigs are a bright green color, which makes a hedge of it very attractive all winter
Kalmia Latifolja, (Monntain Lanrel). This splendid native evergreen shrnb makes a beantiful and unique hedge. It would be worth growing for its fine cvergreen foliage alone, but when it is in bloom in June, nothing in the world makes a finer floral display. Nice transplanted plants 6 to 12 inches
Lliacs. The common purple and white lilacs make a desirable flowering hedge, but of course a very tall one. I can supply both colors, nice plants, ito 2 feet high hedge which blooms in August. They should be cut back a littie, just enongh to keep them compact. Nice young plants, seeditngs $\qquad$
Crlmsnn Rambier Rose. This remarkably fine climbing rose makes a superb hedge if planted in a row, and cut back early every spring to abont three feet high
Sweet Briar. The popnlar sweet briar makes an attractive hedse and is desirable for planting along fence ose Mad. Plantier. This well known liardy white rose makes a fine hedge, and when in full bloom in June nothing can be more attractive

## Ornamental Grasses. FOR BEDDING PURPOSES.

The following grasses and reeds are splendid for making tropical-looking bods and groups, and being entirely hardy and of the easiest eulture, require but little attention after planting. The Eulalias grow from four to six feet high, and the Arundo Donax, in very rieh soil, will grow to be sixteen feet high. These plants inake splendid beds, and should be generally eultivated. There are two notably fine beds of them in this eountry, one in the U. S. Botanie Gardens at Washington and the other in the grounds of the late Geo. W. Childs, Esq., near Philadelplia, and there is nothing more striking in either grounds.

Eulaila Japonica Varlegata, green and white variegations, $\$ 1.25$ per
Eulaila 2ebrina, variegations across the leaf; very odd, $\$ 1.25$ per doacn ;
$\$ 6.00$ per too.
Eulalla Gracilima, a new variety of extremely beantiful and graceful habit; sltolld be always planted on ontside of bed or group. $\$ 1.25$ per dozen; $\$ 6.00$ per 100 .
Erianthus Ravennx, a strikingly beautifnl hardy grass, growing about 12 feet high. 35 cents eaeln: $\$ 3.5^{\circ}$ per dozen ; $\$ 20.00$ per 100 .

Arundo Donax, of very striking appearance; will grow 16 fect high in riclı soil. \$3.00 per dozen; $\$ 20.00$ per 100 .
Apundo Donax Variegata, a beantiful variety of the ahove, with variegation of white; grows 5 to 8 feet, $\$ 2.50$ per dozen; $\$ 15.00$ per 100 .
Bambusa Metake, (liardy banboo). 'lhis beantifnl Banboo is perfectly hardy and fine for producing tropical effects, 50 cents eaeh; $\$ 5.00$ per doz.

## Water Lilies.

## Special Offer of Nelumbiums (Lotus).

Nelumblum Speciosum (Egyptian Lotus). The well-known and far-famed speeies. Its superb flowers and magnifieent foliage produee a splendid sub-tropieal effeet. The flowers, whiel are about a foot aeross when fully opened, are of a deep rose color with a soft ereany white at base of the petals; exquisitely fragrant. Flowering tubers or plants, 30 eents each ; $\$ 3.00$ per dozen;

## RAMBLER ROSES

The Ciardeners' Chronicte, of London, England, printed an illustration from a photo of the Crimson Rambler Rose, zohich is welt known for its extraordinary free blooming character. According to this picture, sixteen strong stalks ornament a hedge twetze yards in length. Every stalk carricd about fifty ctusters of flowers. If the fact is taken into consideration that each cluster averages about forty open flowers, one arrives at the enormous total of 32,000 roses to a single plant. The paper also emphasizes the fact that this variety is very hardy.'

The sales of Crimson Rambler Roses have greatly exceeded that of any other Rose extant within the same number of years, and it is said that the fortunate English introducers of this variety have made a profit of over one liundred thousand dollars with it. For two or three years after its introduction I was rather skeptical of its merits, but I an mow convinced that they liave never been exaggerated. It is strikingly beautiful, absolutely hardy, and no rose can be used for more purposes. As a climber it is unsurpassed, perlaps unequalled; as a pot plant for forcing, the florists are findingit extremely popular; by keeping it cut down it makes a spiendid bedding rose, and a liedge of it is one of the most beautiful objects imaginable. I ean supply a splendid stock of plants, all grown on their own roots, at these extrenely low priees: 30 cents each, $\$ 3.00$ per dozen, $\$ 20.00$ per 100 .

## ROSA WICHURIANA.

In some respects this rose, which is also known as the "Memorial Rose," is better than Crimson Rambler, although it lacks the brilliant color of its more advertised contemporary. As a elimber for covering porelies, trellises and arehes, and as a creeper for covering steep banks or any ground needing eovering, it is unequaled. The foliage is a lustrons shining green. lif bloom the plant is literally covered with exquisitely beantiful single white flowers, whicla are followed by an abundant erop of bright red heps or berries, whicle remain on the plant all winter. The rose is entirely free from attacks of insects or disease, and is absolutely hardy, root and branch.

Strong Two year Old Plants, 30 cents each, $\$ 3.00$ per dozen, 820,00 per 100 ,

## ROSES.-Continued.

## Lord Penzance's New Hybrid Sweet Briars.

The Sweet Briar, or Iiglantine, is acknowledged by all to possess one of the swectest perfumes that nature has provided, and its delicions scent is the object for which it is usually cultivated. These new varieties are vast improvements upon the old sorts. They are lybrids obtained by the late Right Hon. Lord Penzance between the common Sweet Briar and various old-fashioned garden Roses, and are possessed of the following advantages:

The flowers, which are borne in wonderous profusion, are varied in color from white, through several shades of pink, to very dark red or erimson.

For vigor or growth there is scarcely anything in the Rose world equal to the man. Plants threc years old have now many shoots on them that rise to the leight of twelve feet. These, with a slightly outward bent and clothed with flowers of exquisite tints, produce a gorgeous effect not easily forgotten by any who have seen them.

These Roses are more effective when naturalized or used anong slr rubs than when used as garden plants.

Anne of Gelerstein, dark crimson.
Flora Mciver, pure white, bluslied rose.
Meg Merrilles, crinson.
Amy Robsart, lovely dccp rosc, graceful buds.
Brenda, blush or peach, lainty in coloring ancl slinding.

Catherine Seyton, soft rosy pink, frec blooming,
Lucy Bertram, fine decp crimson, very rich.
Rose Bradwardine, beautiful clear rose.
Lady Penzance, beatiful soft tint of copper, very lovely.
Lord Penzance, soft shade of fawn passing to a lovely emerald yellow.
cuts cach; $\$ 3.00$ per dozen; $\$ 20.00$ per 100 .

## Wild Roses of Various Countries.

ROSA SETIGERA.

Witlt the exception of the Japanese rose, Rosa Rugosa, American nurserymen liave ignored the manerous wild roses, which is uufortunate, for they are undoubtedly the most decorative roses that can be planted, aud splendid effects are to be had with them not oltainable with any other plants, and as a rule they are of the easiest culture, vigorous growers and entirely free from attacks of insects or disease. The flowers of all are of course single, but many people, of whon I an one, think singlc flowers more beautiful than double ones, which after all are abnormal and the coloring, form and often tlie arrangement of single roses is exquisitely beautiful. I think one of the most beautiful garden pictures I have seen was a trellis covered with a Rosa Mulitiflora with a border of colored paonies at the base of the trellis. Both pronies and roses were in bloom. The rose was covered with literally thousands of its lovely white blooms, each with a center of rich yellow stamens.

These wild roses can be used in many ways; some are climbers and can be used for covering anything desirable to cover with a climber; others like Rosa Wiciuliana are creepers, and are splendid for covering rough banks, others are desirable for planting among shrubbery but especially Rosa Rubrifolia, Rosa Rugosa and Rosa Sitigera. Rosa Rubrifolia is especially striking on account of its reddish-purple foliage which makes a finc contrast with its own lovely pink flowers and with the green foliage of surrounding slirubs. Rosa Rugosa is now pretty well known but is deserving of the greatest popularity. It has every good quality, splendid foliage, inmense single white or red flowers, which bloon freely all season and whiclt are followed by large, beautiful red fruit which lasts until severe freezing weather comes in winter. It should always be planted in masses, either by itself or in connection with other shrubbery. It also makes a beautiful hedge.

## HARDY AZALEAS.

Each. Perdoz

## Ghent Azaleas (Waterer's stock), good plants of the firest

known kinds, well budded....................... 气i $\infty$ En 00
Azalea Mollls (Waterer's stock, good plants of the finest
known kinds, well set with hloom buds............................. in In oo Ghent Azaleas (French stock), good strong, bushy; plants, well set with bloom buds, good colors: per 100, 845.00 ............... $65 \quad 65$ Azalea Mnllis (French stock), good, strong, bushy plants, well
set witb hloom buds, g rod colors: per $100, \$ 35.00 . . . . . . . . .$. The French Azaleas are nice piams, ama will give sidisiaction, but it takes solong to bring them from the South of France that the bloom buds are apt to be injured, and they do not bloom satisfactorily the first season. After the first sea on they will bloom as well as any other stock.

Flowers of Azalea Mollls.

## Special Offer of Azalea Mollis.

Itake special pleasure in offering an exceptionally nice lot of small Azalea Mollis at a price much less than ever made beforc. The plants are $S$ to in inclics high, bushy and in finc condition, a small percentage of them bcing set with buds. The Azalea Mollis is of comparative dwarf, bush-like labit, with light green leaves, which are somewhat larger than thosc of other azaleas.

The flowers are as large as the Indian Azaleas, ustally seen in greeuhouses, being two and a lialf to three inches in diameter, and appear in bunches on the ends of the shoots. The colors are of various shades of yellow and red, and they expand about the middle of May.

We know of no other flowering shrnb to cqual them in attractiveness, and when massed in a largc bed they create a particularly beautiful spot on the lawn.

They are also very effective when planted around the edges of Rhododendron beds, as the dark green leaves of the Rhododendrons make a strong backgrout for the bright colors of the Azaleas. They are also valuable for mixing in beds with the Azalea Pontica (Ghent Azalea), as they bloom a little in advance of the others. Price, 35 cents each, $\$ 3.50$ per dozcu, $\$ 25.00$ per hundred,

Finc large plants, 12 to 18 iuches, well set with bloon buds, 65 cents each, $\$ 6.50$ per dozen, $\$ 35.00$ per liundred.

## Native and Other Azaleas.

Our native Azaleas are easily among the most beautiful flowering shrnbs in the world, but litherto it has becn impossible to get good plants of them as the stock gencrally offered is newly collected from the woods and very unsatisactory. The following stock I have had specially grown for my customers, and with the exception of AzAIEA NUDIFI,ORA, it is strictly first class and in splendid condition, and many of the plants well set with bloom buds.

$$
\text { Each. Per Doz, Per } 100 .
$$

Azalea Arborescens (Native), splendid foliage throughout the summer. Large white sweet scented flowers; the latest Azalea to bloom, fine plants 12 to 18 inches.

- Caiendulacea (Native). (Great flame-colored Azalea), flowers vary from deep crimson to a bright sulphur yellow: very showy. Fine plants, 18 to 24 incbes
$60600 \quad 4000$
- Nudiflora (Native). This is the Azalea found so plentiful in the P ennsylvania mountains along the Allegheny River, and commonly known as the Wild Honeysuckle. Lovely pink flowers produced in the greatest profusion. Une of the most desirable shrubs in cultivation.
" Vasoyl (Native). This lovely Azalea has at tracted a preat deal of attention lately, especial ly in England where it is highly prized. The ly in England, where it is highly prized. the howers appear before the foliage in Aprit in the greatest profusion and vary from white to deep pink. This Azalea will in time grow to be 12 or 15 feet high

[^3] flowers; nice plants 12 to 18 inches................ Ghent. The following were imported from the best Azalea nurseries in Europe, and have since been grown in this country. They are exceptionally fine plants and well set with bloom buds. The Ghent varieties are the finest of all Azaleas and should be made a feature in every garden. They are extremely effective planted in masses, and especially suitable for planting Japanese and other lilies among. The flowers, sweet scented, produced in the greatest profusion and range in color from white to deep crimson through all slades, pink and yellow.
Extra fine plants, well set with bloom buds,

Extra fine specimen plants. weli set with 250
" Amoena, a dwarf, compact evergreen variety witb rosy purple flowers, makes a beautiful specimen or can be used for an ornamental liedge; small plants.

SCENE IN THE FAMOUS WATERER NURSERY, ENGLAND.-Fior list of stock from this inursery, see page 7 .

## Landscape Gardening.

The majority of American suburban grounds are laid out and planted without the aid of professional advice. The resnlt is almost always nusatisfactory, although often the expenditure would have secured most beautiful resnlts if directed by skilled advicc. I do landscape gardening-do it for people of exacting taste, to whom I refer. I make the plans, with cstimates; purchasc the stock necessary and superintend the work. I do any one or all of these things, satisfactorily as to results, moderately as to cost. For small grounds I can make satisfactory plans if furnished with a plat drawn to scalc. For large grominds, and where extensive improvements are desired a personal visit wonld be necessary and can be arranged for on rcasonable terms. I can make no plans during the month of April.
